CERTIFICATE

of Product Conformity (QAL1)

Certificate No.: 0000035018_01

| Certified AMS: | Oxatex 3107 C67 for O ₂ |
|-----------------|--|
| Manufacturer: | FIVES PILLARD 13, rue Raymond Teissère 13272 Marseille Cedex 8 France |
| Test Institute: | TÜV Rheinland Energy GmbH |

This is to certify that the AMS has been tested and certified according to the standards

EN 15267-1 (2009), EN 15267-2 (2009), EN 15267-3 (2007) and EN 14181 (2004)

Certification is awarded in respect of the conditions stated in this certificate (this certificate contains 7 pages).

Suitability Tested EN 15267 QAL1 Certified Regular Surveillance

Certificate: 0000035018_01 / 18 July 2017

Test report: Initial certification: Expiry date: Certificate: Publication: 936/21212141/A of 20 March 2012 20 July 2012 19 July 2022 renewal (previous certificate 0000035018 dated from 20 August 2012 with validity up to the 19 July 2017) BAnz AT 20.07.2012 B11, chapter II number 1.1

Approved application

The tested AMS is suitable for use at combustion plants according to Directive 2010/75/EU, chapter III (13. BlmSchV), at waste incineration plants according to Directive 2010/75/EU, chapter IV (17. BlmSchV), at plants according to the 27. BlmSchV and other plants requiring official approval. The measured ranges have been selected considering the wide application range of the AMS.

The suitability of the AMS for this application was assessed on the basis of a laboratory test and a three-month field test at a waste incineration plant.

The AMS is approved for an ambient temperature range of -20 °C to +50 °C.

The notification of suitability of the AMS, performance testing, and the uncertainty calculation have been effected on the basis of the regulations valid at the time of performance testing. As changes in legal regulations are possible, any potential user should ensure that this AMS is suitable for monitoring the Oxygen concentration relevant to the application.

Any potential user should ensure, in consultation with the manufacturer, that this AMS is suitable for the installation at which it will be installed.

Basis of the certification

This certification is based on:

- test report 936/21212141/A of 20 March 2012 of TÜV Rheinland Energie und Umwelt GmbH
- suitability announced by the German Federal Environment Agency (UBA) as the relevant body
- the ongoing surveillance of the product and the manufacturing process

Umwelt 🎲 Bundesamt

Certificate: 0000035018_01 / 18 July 2017

Publication in the German Federal Gazette: BAnz AT 20.07.2012 B11, chapter II number 1.1, Announcement by UBA from 06 July 2012:

AMS name:

Oxatex 3107 C67 for O2

Manufacturer: Fives Pillard, Marseille, France

Approval:

For measurements at plants requiring official approval and plants according to $\rm 27^{th}\ BImSchV$

Measuring ranges during the suitability test:

| Component | Certification range | Unit | |
|----------------|---------------------|------|--|
| O ₂ | 0 – 20.9 | Vol% | |

Software version:

V 3.1

Restrictions:

None

Remarks:

- 1. The maintenance interval is four weeks.
- 2. For peripheral parameters characterised by a high moisture content in combination with a high content of dust or a high dust content with a tendency of sticking, the filter needs to be checked more frequently.

Certificate: 0000035018_01 / 18 July 2017

Publication in the German Federal Gazette: BAnz AT 02.04.2015 B5, chapter IV notification 32,

Announcement by UBA from 25 February 2015:

32 Notification as regards Federal Environment Agency (UBA) notice of 06 July 2012 (Federal Gazette (BAnz AT 20.07.2012 B11, chapter II number 1.1)

The current software version for the OXATEX 3107 C67 measuring system for oxygen, manufactured by Fives Pillard, is:

V 3.3 (display)

V 3.4 (CPU)

Statement of TÜV Rheinland Energie und Umwelt GmbH of 30 September 2014

Certificate: 0000035018 01 / 18 July 2017

Certified product

This certificate applies to automated measurement systems conforming to the following description:

The Oxatex 3107 C67 measuring system measures O_2 in the measuring range of 0 - 20.9 Vol.-% using a zirconium dioxide probe.

The measuring instrument is comprised of a sensor with a heater, a flue gas inlet tube, a dissipater and the rear housing comprising electronics such as a display and an infra-red remote control. Additional optional test gas bottles with a suitable flow regulator are available.

Test gas is brought to the sensor due to natural circulation of at least 0.5 m/s which is led into the inlet tube by a deflector situated at its tip.

The flue gas inlet tube is divided into two by the extension of the deflector, which forms an angle of 135° with the gas flow direction. This way, flue gas enters the inlet tube on the side facing the flue gas and leaves the tube on the opposite side.

The sensor is situated near the rear housing which is connected to the probe. The sensor comprises an electrode in contact with the gas to be measured and an electrode in contact with the reference gas. The test gas and the reference gas are separated by a layer of zirco-nium dioxide.

At high temperatures, zirconium dioxide becomes a conductor of oxygen ions.

The difference in oxygen content of the gasses on each side of the zirconium dioxide generates a voltage between the electrodes. According to Nernst's law, this voltage is proportional to the oxygen content of the gas being measured. The rear housing on the OXATEX 3107 C67, which is connected to the sensor, has the electronics required for sensor signal processing.

Energy supply is ensured via a ring lock circular connector at the front of the electronics housing. This is also where analogue and digital signal outputs are situated.

A dissipater situated between the flue gas inlet tube and the rear housing. This avoids an over-heating of the electronics housing.

The measuring system is configured using an infra-red remote control. For this purpose, a display board is integrated into the electronics housing.

The current oxygen concentration as Vol.% is displayed during the operation of the measuring system. Furthermore, signal lamps indicate if certain limit values are exceeded.

The current software versions are: V 3.3 (display) and V 3.4 (CPU).

The current version of the manual is: NOT-24-G/10.

Certificate: 0000035018 01 / 18 July 2017

General notes

This certificate is based upon the equipment tested. The manufacturer is responsible for ensuring that on-going production complies with the requirements of the EN 15267. The manufacturer is required to maintain an approved quality management system controlling the manufacture of the certified product. Both the product and the quality management systems shall be subject to regular surveillance.

If a product of the current production does not conform to the certified product, TÜV Rheinland Energy GmbH must be notified at the address given on page 1.

A certification mark with an ID-Number that is specific to the certified product is presented on page 1 of this certificate. This can be applied to the product or used in publicity material for the certified product.

This document as well as the certification mark remains property of TÜV Rheinland Energy GmbH. With revocation of the publication the certificate loses its validity. After the expiration of the certificate and on requests of the TÜV Rheinland Energy GmbH this document shall be returned and the certificate mark must not be employed anymore.

The relevant version of this certificate and its expiration is also accessible on the internet: **gal1.de**.

Certification of Oxatex 3107 C67 is based on the documents listed below and the regular, continuous monitoring of the Quality Management System of the manufacturer:
